

CloudConnect Communications launches audio, video and web conferencing solution WeConference

Mobile-first [virtual network](#) operator [CloudConnect Communications](#) has launched WeConference, an audio, video and web conferencing solution. [WeConference](#) enables HD [video conferencing](#) and webinars for brands to connect and collaborate.

Amid the [COVID-19](#) outbreak, several companies have transitioned to remote working models, and are increasingly relying on video conferencing solutions to connect their teams and ensure business continuity. CloudConnect Communications offers a homegrown solution.

The platform's WebRTC-based online conference room utilises both Datagram Transport Layer Security (DTLS) and Secure Real-time Transport Protocol (SRTP) to encrypt data. It allows moderators to secure the virtual conference room by using tools like 'moderator-only access, one-time password and PIN, conference room lock and user blocking feature. All voice and video calls are fully encrypted while media is encrypted from all participants to the company's server, claims the company.

Furthermore, chat messages are sent via HTTPS and received via WebSockets over SSL/TLS. WeConference does not share user data with any third-parties, claims CloudConnect. As such, it does not have any 'Login with Facebook or Google' features. Finally, the platform's desktop app installation has been verified secure by VeraCode as part of the PenTest run in late 2019, claims the company.

Apart from its leading-edge security features, WeConference offers a host of other features such as AI-led transcription, audio, and video recording, integrated dial-ins, live video streaming and meetings with 100 participants. Its Auto-Tag feature automatically transcribes the recording while the Smart Search tool allows you to search for keywords within the meeting transcript.

Speaking on the new launch, Raman Singh, co-founder and CRO, CloudConnect Communications, said, "Due to the COVID-19 crisis, employees from most organizations are now working from home. As India's first and only end-to-end cloud & mobile app-based PBX and unified communication service provider the development of a tech-backed video conferencing solution was our next natural progression. With WeConference, we aim to offer companies a secure solution that they can rely on to carry out their meetings and conferences seamlessly.
